Understanding Microphone and Speaker Behavior

When your phone is connected to a Polycom HDX system or Polycom RealPresence Group system, your setup may include additional microphones other than your phone's internal microphones. These microphones can include:

- Analog expansion microphones connected to your phone.
- Microphone Arrays connected to your Polycom HDX system or Polycom RealPresence Group system.
- Analog microphones connected to your Polycom HDX system or Polycom RealPresence Group system.

When you have a call – either audio-only or video – all microphones connected to the phone and Polycom HDX system or Polycom RealPresence Group system are used.

Even though your setup uses all microphones during a call, not all speakers are used. Depending on the call, either your phone's speaker is used, or the Polycom HDX or Polycom RealPresence Group system's speakers are used.

Speakers are used in the following ways:

- Video-only calls use the Polycom HDX or Polycom RealPresence Group system's speakers only.
- Audio-only calls use the SoundStation IP 7000 speaker only.
- Adding video to an audio-only call switches from the phone's speaker to the Polycom HDX or Polycom RealPresence Group system's speakers as soon as the video call connects.
- Adding audio to a video call continues to use the Polycom HDX or Polycom RealPresence Group system's speakers. The Polycom HDX or Polycom RealPresence Group system speakers are used as long as there is one video participant.

Controlling Volume and Muting Calls

You use your phone's volume and Mute buttons to mute and adjust the volume of both audio-only and video calls.

To adjust the speaker volume:

To mute the microphone if you use an expansion microphone or Polycom Microphone Array:

>> Press  on the phone console or the  button on the top of the expansion microphone or Polycom Microphone Array.

To turn off the Mute feature, press  or  again.

Note

When you press the Mute key on the phone, or on any expansion microphone or Polycom Microphone Array, you mute the microphone on the phone and all expansion microphones and Polycom Microphone Arrays connected to your phone and to the Polycom HDX system or Polycom RealPresence Group system. (You will not mute audio from other sources, such as a computer, VCR, or DVD player.)

You can also control the volume and mute microphones (including your phone's microphones) using the Polycom HDX or Polycom RealPresence Group system's remote control or Polycom® Touch Control. For more information, see the user guide for your system, which is available by navigating from the [Video Support](#) page.

Showing Content

A Content soft key displays on your phone so that you can show content to near-site participants, as well as to near-site and far-site video participants during a video call or conference. The Content soft key displays when your phone is idle, or when you have a call.

Depending on the Polycom HDX system or Polycom RealPresence Group system you have, you may be able to show the following:

- Information stored on a computer
- A paper document or object placed on a document camera
- A videotape or DVD

For information on how to connect a computer, document camera, VCR, or DVD player to a Polycom HDX system or Polycom RealPresence Group system so you can show content, see your system administrator.

For detailed information on how to show content, see the user guide for your system, which is available by navigating from the [Video Support](#) page.

To start and stop showing content:

>> Press the **Content** soft key.

Handling Computer or Mobile Audio

Your conference phone has a 2.5mm audio connector to connect to a mobile device or to a computer calling application. You connect a mobile device or computer calling application so you can use the conference phone speaker to stream two-way audio from the mobile device or computer calling application for hands-free conversations. When you connect mobile or computer audio to your conference phone, all participants in a call or conference call (including those connected through a mobile device or computer calling application) can hear and speak to each other.

You connect your phone to a computer or mobile audio source using the Computer Calling Cable or Mobile Device Cable. For information on connecting these cables to your phone, see the *Integration Guide for the Polycom SoundStation IP 7000 Conference Phone Connected to a Polycom HDX System or Polycom RealPresence Group System in Unsupported VoIP Environments*, available from the [SoundStation IP 7000 Video Integration with HDX Series and RealPresence Group Series](#) Support page.

Your phone handles computer or mobile audio just like an audio-only call, except:

- All computer or mobile audio displays on your phone screen as *From: PC-Mobile audio*.
- You do not use  or the **Answer** soft key to listen to computer or mobile audio. For information on how to listen to computer or mobile audio, see [Listening to Computer or Mobile Audio](#), below.

Note

Your conference phone always displays an audio source (*From:PC-Mobile audio*) if either the Computer Calling Cable or Mobile Device Cable is connected to your conference phone.

Audio from computer calling applications or mobile devices does not display in your conference phone Call Lists.

Listening to Computer or Mobile Audio

You can connect the computer or mobile audio source while your conference phone is in an idle state, or when you already have a call.

If you connect a computer or mobile audio source to your conference phone when your conference phone is idle, you immediately hear any audio associated with the mobile device or computer calling application.

To listen to computer or mobile audio when you already have a call:

- >> Connect the computer calling application or mobile device to the conference phone.

A conference is automatically created between yourself, the existing call, and the computer or mobile audio source.

To remove a computer or mobile audio source, disconnect the Computer Calling Cable or Mobile Device Cable from the conference phone. If you want to keep the connection for future computer or mobile audio calls, end the call from your computer or mobile device, but do not remove the Computer Calling Cable or Mobile Device Cable. Your conference phone will always display an audio source (*From:PC-Mobile audio*) if either cable is connected to your phone.
